**POLYACETYLENE.
SYNTHESIS, STRUCTURE AND APPLICATION**

The monography

Volgograd 2013

CONTENTS

1. Synthesis, structure, physicochemical properties and application of polyacetylene.	3		
1.1 Introduction	3		
1.2 Synthesis and structure of polyacetylene.	3		
1.3. Physicochemical properties and application of polyacetylene	10		
2. The nature of kinetic properties of quasi-one-dimensional polymers (the review of properties and methods of their studying).	21		
2.1. Introduction.	21		
2.2. A general characteristic of one-dimensional systems.	21		
2.3. A general properties of the polyacetylene	24		
2.4. Problems which have arisen at research of polyacetylene.	28		
2.5. The conclusion.	30		
3. The nature of kinetic properties of polyacetylene.	30		
3.1. A structure and properties of polyacetylene.	30		
3.2. The Model of polyacetylene.	32		
3.3. The Discrete model.	33		
3.3. Results from discrete model	34		
4. Continual model of polyacetylene.	38		
4.1. Model.	38		
4.2. Discussion of decisions of system of equations.	40		
4.3. Soliton excitation and physical properties of polyacetylene.	42		
5. Two-dimensional models of relativistic quantum theory of field and of polyacetylene.	48		
5.1. Gross-Neview model	48		
5.2. Model fie-four with Fermi particles.	52		
5.3. Final remarks.	54		
6. Phase transitions in bidimensional models of the theory of a field and polyacetylene.	55		
6.1. Introduction.	55		
6.2. Effective potential of Gross Neview model.	55		
6.3. Model fie!-four with Fermi particles.	60		
		6.4. Model of trans-polyacetylene.	63
		6.5. Model of cis- polyacetylene.	64
		7. Solitons with fractional charges in polyacetylene.	65
		7.1. Introduction.	65
		7.2. Model fie!-four.	65
		7.3. Solitones with fractional charges.	68
		8. Change of a fractional charge of soliton.	71
		9. Transition dielectric- metal in polyacetylene.	74
		9.1. Introduction.	74
		9.2. Experimental data.	75
		9.3. Theoretical models.	78
		The conclusion.	78
